

STEEL ROOFING - DO IT RIGHT THE FIRST TIME

“Z200 pre-painted galvanised steel is not recommended for application in marine environments or exposure to industrial environments. Z275 is recommended for these areas between 1 and 5 km from the sea.”
 - Hot Dip Galvanisers Association SA - SA Roofing Magazine, March 2009.

Are you getting what you paid for?

There are certain types of pre-painted galvanised steel roofing materials that are being incorrectly used at the coast - directly against the manufacturers' own guidelines.

For a pre-painted steel roof that keeps its colour longer and lasts up to four times longer in harsh coastal and industrial conditions, Clean COLORBOND™ steel is the roofing material of choice of architects and other building professionals.

GUIDELINES	DISTANCE TO SEA		
	100 - 400 m	401 - 1000 m	1 - 5 km
